ABOUT ME

Architecture student at the University of Limerick, having completed third year and seeking a work placement for professional experience before fourth year. Award-winning writer and researcher on AI infrastructure, with three years of studio work adapting existing buildings across Limerick City. Brings an analytical foundation from prior mathematics study, alongside strong design software skills and hands-on model-making experience.

SKILLS

Design Software

Advanced | AutoCAD, Photoshop, InDesign
Proficient | Rhino, SketchUp
Working Knowledge | Revit, Grasshopper

Computational / Scripting

Advanced | Python, JavaScript, HTML, CSS
Proficient | SQL, Node.js, Git

Other

Physical model-making
Microsoft Office (Excel, Word)

AWARDS

SAUL Dissertation of the Year Award, 2026

University of Limerick

Judged by an external panel and presented at the opening of the Design@UL exhibition.

LANGUAGES

Native | English
Fluent | Irish
Leaving Certificate | French

AVAILABILITY

Available immediately, to September 2027.

WORK EXPERIENCE

● Crew Member

McDonald's, Castlebar
June 2022 - Present

- Provide customer service in a fast-paced environment, handling orders accurately and efficiently under pressure.
- Support team operations across front-of-house and kitchen, adapting to whichever station the shift requires.
- Train new team members on service standards and daily operations.

● Full Stack Web Developer

Freelance
August 2017 - September 2023

- Ran a freelance practice throughout secondary school and university.
- Designed and developed custom websites and web-based applications for independent clients internationally.
- Handled user interfaces, back-end architecture and database integrations across the full stack.
- Sourced and managed clients independently, from initial brief through to delivery.

EDUCATION

● Bachelor of Architecture (B.Arch)

University of Limerick
2023 - Present

- School of Architecture (SAUL); third year of a five-year degree completed.
- Three years of studio work centred on the adaptive reuse of existing buildings in Limerick City, including a multi-storey car park converted to housing, a church adapted as public space with shelter provision, and a laneway block reused as a healthcare centre.

● Mathematics

Trinity College Dublin
2020 - 2022

- Completed two years before transferring to Architecture at University of Limerick.

RESEARCH

● How Much Does a Cloud Weigh?

The Architecture of Artificial Intelligence in Ireland
May 2026

- Examined the physical and infrastructural footprint of AI and cloud computing through a series of Irish case studies.
- Primary research across two sites: a full-frontage photographic survey rectified into a building elevation where none existed, site mapping over aerial imagery, and national consumption figures compiled from CSO returns and planning submissions.
- Argued that restrictions on Dublin's grid have pushed data centre development into western regions ill-equipped to absorb it, shifting the burden rather than resolving it, and read these buildings as a new and largely unexamined rural typology.
- Adapted into a standalone essay submitted to the RIAI Student Writing Prize 2026, to be announced in October.
